Official distributor for
FIROVAC in Canada
POWER SYSTEM

Service provided
across Canada

A **new design** for fire departments. This concept is intended to enhance water-carrying performance.

Perfectly designed for operations in rural areas, the vacuum tanker is the **best to supply a maximum amount of water** with a minimum of staff and equipment.

Its vacuum system, which transforms into a pressure system, **minimizes fill-up and discharge times** and allows water carrying at a rhythm never before attained.

This system is **designed for Canadian winters:** the three valves are heated.
